Colour is essential in the modern business environment. It enhances the paper communication process and will improve your image. With the Internet and digital imaging expanding, colour now plays an even bigger part in all types of business applications where complex documents and graphics are required.

The applications for colour range from simple word processing documents where important words, phrases and sentences can be highlighted, through to printing short runs of full colour mailers to send to your clients and business associates. Presentations can be printed in full colour, while the fantastic colour matching capability allows you to print colour proofs of artwork and designs generated by your marketing agencies.

Our range of colour printers will connect directly onto your network using the Ethernet interface that is supplied as standard, so everyone in your workgroup can take advantage of this new facility. Our engineers will even install your colour lasers free of charge in the mainland UK, ensuring you get the best from them from day one.
